Dimensional Inspection Report

PLACEHOLDER

This is a sample inspection report placeholder.
The real sample will follow once production begins.

Every Calib.Tools calibration target ships with a dimensional inspection report that includes:

- Board dimensions and squareness
- Feature position accuracy (measured vs. nominal)
- Surface flatness measurement
- Visual inspection result
- Date, inspector, and equipment used

For ILAC-recognised calibration with traceable measurement uncertainty, add the calibration certificate option when ordering.
